Project Summary:

Unified Project Performance Report (A Performance monitoring app)

Role: UI Developer (Angular)

Technologies: Angular 5, Dot Net.

About:

This project is to help construction companies to monitor their project's progress by using real time data. Generally completing a construction of any building takes some time. This project will monitors a specific project by levels, there are three levels, pre-construction, construction and post construction. There are roles available for all workers (low level worker to management level) and they will have to login and enter all details related to their work. It will create report based on entered data based on configuration. So the management will analysis and monitor the specific project easily.

Beyontec Customer Portal and Beyontec Broker Portal

Role: UI Developer (Angular)

Technologies: Angular 8, JAVA.

About:

Beyontec is insurance provider. I was employed at beyontec by OFS. This Customer portal helps customers to get their motor vehicle insurance by providing the vehicle details and they can choose the insurance plan. This project build from scratch. So I, learnt project initial setup and general theming in angular. And Broker Portal is for non-motor insurance like personal, home and medical. This is used by brokers to generate insurance for customers.

rGuest Service

Role: UI Developer (React Js)

Technologies: React Js, Dot Net.

About:

This is Property Management System (PMS) product. In this product we can create tasks, alerts and messages. And we can assign tasks to the property employees and manage and track them. All data transferred to the employee's wearable devices. This product has minimal version of mobile application as well. This mobile application written in ionic framework.

Agilysys QuickPay

Role: UI Developer (Angular)

Technologies: Angular, Dot Net.

About:

This is payment service providing application. For POS and PMS application, this QuickPay application provides payment service and POS and PMS applications will integrate this QuickPay application. This will supports payment methods like Credit card, Loyalty, Gift card, Post to Room Charge, Airline Voucher. The customer can choose the payment method they prefer and pay. This application has support to iframe as well. So it can be used in another application as well.

Major Accomplishment: Migration Completed from Angular 8 to Angular 14.
